

IN THE CLAIMS

Please amend claim 1 as follows:

1. (Twice Amended) A method for transferring a transparent conductive film onto one surface of a sheet base material made of a plastic material, wherein said transparent conductive film as an object to be transferred is preliminarily formed on a substrate which is superior in heat resistance to the plastic material, said transparent conductive film being sandwiched between a peelable layer which can be peeled off at the time of transfer and a protective film for protecting said transparent conductive film on said substrate which is superior in heat resistance to the plastic material; said transparent conductive film being made of a metal oxide having a specific resistance of 3.0×10^{-4} ohm-cm or less, formed by a vacuum deposition method.
